

# Sridharan Radhakrishnan

## Principal Software Engineer

Sri is our Principal Software Engineer and he enjoys learning and implementing new technologies as he helps to transform PRI's software services.

I joined PRI in 2021 as a Senior Software Engineer but within eight months was promoted to Principal Software Engineer. Since then, my focus has been on improving our software which is used by PRI employees, customers and contractors worldwide.

Coming to PRI, I brought with me useful experience from retail and banking. I use my knowledge of performance from retail, making sure that new software services are faster than that required under service level agreements. From the banking sector I brought experience in security, and I apply that to taking care over authentication and authorization. I had also worked across various projects, with skills in managing global teams, so that also stood me in good stead with PRI as an international company.

When I think back to what attracted me most to PRI when I applied, it was the tech stack, and the opportunity to explore and work across a wide range of new technologies. Since then, I have become proud to be part of an organization that plays a key role in helping to keep people safe. From aerospace to medical devices and more, we help global industries improve oversight of their supply chains, and I feel a strong sense of personal accomplishment from the work.

As a new employee, my team made me feel welcome, and helped to bring me up to speed, assisting with any questions that I had. Over time, as I've settled into the role, I have received various rewards and recognitions, and this has helped me to feel more motivated towards my day-to-day work. I would say there is a strong and positive working environment here, and that is fostered

by the managers who are approachable, and are there for you to provide support, ensuring the best outcomes for all projects.

At PRI, I feel that my work is valued and appreciated. I benefit from receiving real-time feedback all year round instead of just year-end reviews, as is the case with many other employers, and that affords me a great opportunity to continuously develop my knowledge, skills and abilities.

Overall, I am comfortable working here, and I enjoy a good work-life balance. I know that my work is a relatively small part of the work that is taking place across PRI to enhance services for customers, but I take pride in my role and understand how it fits into the bigger picture. I feel that I am benefitting from learning and implementing new technologies, while the company also benefits through improved results. Looking to the future, with many new works planned, I can see further opportunities to grow my technical skills, and to seek out interesting new responsibilities and experiences.

Based in Warrendale, Pennsylvania, USA

Joined PRI in 2021

BE Computer Science

Enjoys the fact that he can learn and develop new technologies
